

What's new in 14.2?

The **Next Generation** of G DATA Business Solutions

The next version of our enterprise solutions will be available in spring 2019. The update includes our new DeepRay technology, that protects your endpoints from camouflaged malware. Also new: the Light Agent for resource-saving protection of virtual machines as well as the possibility of managing multiple tenants in a single instance.

We're changing the rules of the game against cybercrime

Our new DeepRay technology uses artificial intelligence and machine learning to protect you from the sophisticated tactics of criminal hackers. DeepRay detects camouflaged malicious programs and fends off fast-moving malware campaigns effectively.

Virtual systems – **real protection**

The G DATA solution is optimally geared for the protection of virtual environments: Light agents in each VM conserve your resources and provide the full security of our award-winning Endpoint Security Clients.

Multi Tenancy: Advantages for safety

You would like to expand the networks of your national subsidiaries or business units managed separately by different employees? No problem: Thanks to multi tenancy, you can conveniently and centrally control access rights.

Does this sound interesting to you?
